

# DE-VEINED & SMOOTH

When I look at the 'before' photos, I can hardly believe the results! Now I have my self-confidence back. I am so excited to go shopping, I am finally able to wear shorts and dresses with full confidence!

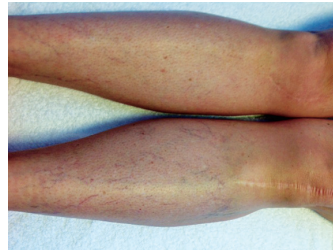

~Kim, Owen Sound

**Kim is a 44 year old mother of two children** and a Registered Nurse in Owen Sound. She has spent over 20 years as a nurse - most recently in palliative care. In May 1994, she suffered a near-fatal car accident and required seven orthopedic surgeries to repair the damage to her legs. The accident, the surgeries and years of working long hours on her feet resulted in a "colourful road map" of purple and blue veins on both her legs. This caused Kim years of feeling uncomfortable whenever her legs were visible in skirts or shorts.

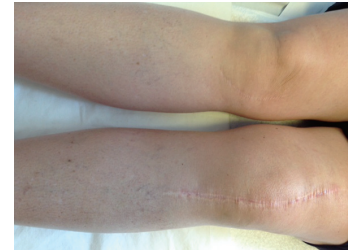

While clothes shopping one day, Kim was trying on dresses and the sales woman asked her if she had ever heard of sclerotherapy (vein treatments). That comment prompted Kim to seek out treatment for her leg vein concerns at Thornbury Leg Vein Clinic.

Kim began with a medical evaluation with Dr. Tim Remillard and then met with Kathy de Langley R.N. for a complimentary consultation before beginning her vein treatments. Sclerotherapy treatments were recommended to eliminate unsightly purple and blue leg veins. Kim was very surprised at how quick, affordable and effective her treatment sessions were. She was able to resume all her regular activities right after her treatments with no interruption to her normal routine.

Kim Before

Kim After

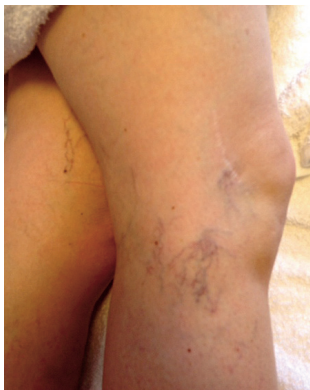

Kim's story is typical of Thornbury Leg Vein Clinic clients. The clinic was opened in 2013 by Kathy de Langley R.N. to provide assessment and treatment for unsightly and uncomfortable leg veins. Kathy first began treating clients in 2000 with Sclerotherapy and Lasers.

Thornbury Leg Vein clients generally see Kathy first for a complimentary consultation and assessment. Then, they are seen by Dr. Remillard for a medical evaluation before commencing their treatments.

Sclerotherapy effectively treats unhealthy and unsightly leg veins. It involves injecting a solution into the affected vein. The solution causes the vein to collapse and forces blood to be redirected to healthier veins. The collapsed vein is then resorbed by the body and disappears. Photographs are taken before treatment so that clients can see the improvement.

Also available are Sigvaris Medical Compression socks and tights. They come in a range of beautiful and fashionable styles that are custom fitted to each individual client. There are even hiking and ski socks and athletic performance compression socks that look great. Compression socks are helpful when worn for long distance car or air travel as well as during pregnancy to improve comfort and circulation and help prevent swollen feet and ankles. Extended Health Insurance plans usually cover the cost of these products as they are proven to be therapeutic.

Early spring is an ideal time for leg vein treatments so that when summer arrives, legs can be bared with confidence. **|E|**
